

# SOMOS CAMISETAS

## IMPRESIÓN DIGITAL TEXTIL

### FILE FORMAT

**Perfect format files to print your design, are:  
AI / PSD / TIFF / EPS / PDF / JPG\***

However, remember that you have to trace your texts layers when you use them in your final art, we need them traced. Background have to be transparent, only have to appear the design to print.

\* **JPG files can't manage transparent background, so we accept them only in case you want to print a picture or design without crops or shapes.**

### RESOLUTION & SIZE

**To print correctly your file, we need as minimum this configuration:  
200 ppp. resolution / Real size of printing.**

Files under this configuration will loose quality in the printing process, so we can't guarantee good results. The sizes (in cm.) have to be as accurate as possible to real size printing, due will loose quality details if we have to enlarge or reduce the image.

### COLOUR

**CMYK or RGB colour space will be used.**

Our job system profiles let us work with both colour profiles. It adapt to your file and accurate the result to get the best result possible according your design.

We recomend saturate and make a good contrast in your image, in order to obtain the best in the printing. When the colour is dried on oven, will loose just a piece of intensity, especially on very dark garment.

### PREPARATION

**Remember: 200 ppp + CMYK or RGB + transparent background.**

If you prepare your file with Adobe Photoshop, erase the background layer, rasterize text layers and save your file in one of these formats: **PSD / TIFF / EPS / PDF.**

You can also work with Adobe Illustrator, then, trace texts and save your file in one of these formats: **AI / EPS / PDF.**

Any other software will let you save the file in one of the formats we accept, **ALWAYS TRANSPARENT BACKGROUND, LETTING SHAPED THE DESIGN.**
